DELETE MOULD

MOULD & ALGAE TREATMENT

Introduction

DELETE MOULD is a specialised formula that uses the power of sodium hypochlorite or bleach as a broad spectrum mould killer and inhibitor. However, bleach by its-self is only a very short term treatment, a 'whitener and brightener'.

We have been able to create a treatment that enhances, penetrates and kills the Mould spores deep in the porous of surfaces where the spores were protected, until now! Our unique formula allows mould removing unlike any product before.

Why choose DELETE MOULD?

- Used by Professional mould removers!
- Delete Mould is a 'ready to use' mould and algae cleaner.
- Delete Mould is fast acting and long lasting
- Delete Mould is easy to apply
- Delete MOULD is able to be used indoors as well as outdoors on a large range of surfaces. **(Always requires a surface test before proceeding)**
- Local testing (Gold Coast) has proven to keep mould off external areas such as retainer walls, driveways, buildings, tennis courts, synthetic grass, shade sales and more.... for up to and beyond 2 years, in many cases considerably longer!
- Perfect for shower grout cleaning and external concrete and outdoor surfaces
- for domestic and commercial use
- biodegradable Ingredients

DELETE MOULD

MOULD & ALGAE TREATMENT

DELETE MOULD, the fastest acting, long lasting, easily applied mould remover that has proven results. Shower cleaning, driveways, pavers, fences, ceilings, canvas, shade sails, camping materials can all be saved and improved with Delete Mould.

How to use Delete Mould?

Outdoor surfaces

1. Broom off excess dirt and grime and rough up mould, Algae on surface to be cleaned.
2. Best applied to dry surfaces.
3. Apply Delete Mould via a spray pack. Garden spray packs are great!
4. Spray Delete Mould over the surfaces to be cleaned. Do not dilute (add water) to Delete mould.
5. Leave Delete Mould on the surface for as long as practically possible. The longer the better. **A minimum of an hour is recommended for outdoor areas.**
6. **Vertical Surfaces** – Always apply product from the ground up. this reduces the risk of etching.

-If the area needs washing down, do not use high pressure water. Garden hose pressure is enough. We want to leave the preventative materials in the pores of the concretes or materials for longer lasting protection.

DELETE MOULD

MOULD & ALGAE TREATMENT

How to use Delete Mould?

Indoor surfaces

1. Open windows and allow good ventilation.
2. Always perform a small test with Delete Mould on the surface about to be cleaned to ensure surface protection.
3. Spray Delete Mould over the surface. Best applied to dry surfaces. (If Delete mould is poured or sprayed in any form other than by misting, this will assist in less fumes).
4. Apply enough product to allow the surface to be wet, but not running.
5. Spray Delete Mould over the surfaces to be cleaned. Do not dilute (add water) to Delete mould.
6. Leave Delete Mould on the surface for as long as practically possible. The longer the better. **A minimum of 20 minutes is recommended for indoor areas.**
7. **Vertical surfaces** - Always apply product from the ground up. this reduces the risk of etching.

For showers, wash off with water until there is no product left on the surfaces.

For ceilings or walls, use a wet product free cloth to wipe off excess Delete Mould.

CAUTION!

Delete Mould contains some bleach and has a high pH. If surfaces are not compatible with bleach, do not use this product.

Natural Stone & tiles are not compatible with this product due to the high pH.

Soft metals such as aluminum can be affected by Delete Mould. However, when wet they are often fine.

Not Septic safe - Refer to Bushby's 'BALANCE' to solve this problem.

Always perform testing in inconspicuous places first for potential damage to surfaces to be cleaned.
